

Explicit Instructions for Darshan for new model

1. Place stop-buy order 1 tick above price, Place stop sell order 1 tick below price. Place trailing take profit if one tick above or below either order is crossed.

2A. Price moves up one tick, a new stop sell order is placed one tick below new price and a trailing take Profit instituted once price passes 102 1 tick below. The price moves up to 103 and back to 102 and the position is closed 1 tick in the profit.

2B. If instead of hitting take profit price comes back down we realize 1 tick loss, and both trailing take profits are moved one tick further away from grid orders

3. Position closes out in profit. All orders are canceled and a new grid is created

Tick size for ES: .25

Need script for when realized loss is larger than X start grid back at normal.
